EDUCATION

University of Tartu   Tartu, Estonia
Bachelor Information Science / Computer Science

Tallinna Humanitaargümnaasium   Tallinn, Estonia
Secondary Education

WORK EXPERIENCE

Lumav Commerce OÜ   Tallinn, Estonia
Junior Software Developer goERP Team   January 2025 - April 2025

- Designed and implemented ERP automation modules using Go and PHP for financial data processing.
- Built data synchronization microservices and automated validation pipelines using Puppeteer and custom APIs.
- Integrated Erply API for reporting automation
- Contributed to microservices improving product data reliability and back-office efficiency.

Lumav Commerce OÜ   Tallinn, Estonia
Junior Software Developer Sync Team   October 2024 - January 2025

- Built modular data sync tools using PHP, JavaScript, and Puppeteer.
- Developed full-stack solutions combining front-end interfaces with backend logic.
- Created dynamic scripts for automated scrolling, clicking, and data extraction.
- ntegrated external APIs for validation and XPath-based parsing.

Freelance / Personal Projects   Tallinn, Estonia
Software Developer   July 2025 - Present

- Built and tested web applications using React, Node.js, and Supabase.
- Developed automation scripts with Puppeteer and API integrations.
- Designed responsive UIs and improved front-end performance.

SKILLS

Programming Languages:	JavaScript, TypeScript, Go, PHP, HTML, CSS
Frameworks & Libraries:	React, Node.js, Express, Puppeteer, Cypress, Jest
Tools & Platforms:	Git, Docker, Netlify, Supabase, Postman, PostgreSQL
Development Practices:	API integration, Test automation, Debugging, Agile & Scrum workflows

PROJECTS

EZBorder — Border Queue Reservation System *React, Node.js, Supabase, Tailwind CSS, React-PDF, QR Code*   https://ezborder.netlify.app/
Developed a full-stack web app for managing border-crossing reservations with user authentication, time slot booking, and automated PDF ticket generation. Implemented live data handling and secure database storage.

E-Commerce Data Crawler *Node.js, PHP, Symfony DomCrawler, Go template, Go*
Developed an internal web-scraping automation tool for structured product data extraction from e-commerce platforms. Built with Puppeteer and Symfony DomCrawler, it handled cookie banners, pagination, and hidden attribute parsing. Currently stored locally as part of my personal code archive.

Casino Lobby *React, Redux, TypeScript, SCSS, MUI*   This project is hosted privately on GitHub for personal use; code access can be provided upon request.
Built a private frontend project simulating an online casino interface to demonstrate interactive UI design and frontend architecture principles. The app features dynamic game cards, hover-triggered video previews, a favorites system managed via Redux, and a responsive layout. Focused on clean code structure, reusable components, and TypeScript-based state management.

AWARDS

Udemy Complete Web Developer-Bootcamp   Certificate
                                                                                                        June 2023
